

Tab's

Alert

The screenshot shows a web-based configuration form for an 'Alert'. At the top left, it says 'Alert' and 'Record saved'. On the top right, there are navigation icons and a page number '1/2'. The form is divided into two main sections: 'Client' and 'Organization'. The 'Client' section has a dropdown menu set to 'Sandbox'. The 'Organization' section has a dropdown menu set to 'Manufacturing Discrete'. Below these, there are several input fields: 'Name' with the value 'A_420', 'Description' with the value 'Alert', and a large 'Comment/Help' text area. There are also four checkboxes: 'Active' (checked), 'Valid' (checked), 'Enforce Client Security' (checked), and 'Enforce Role Security' (checked). Below the checkboxes, there is a dropdown menu for 'Alert Processor' set to 'System Alert Processor'. Further down, there is a text field for 'Alert Subject' with the value 'Heat Alert', and a text area for 'Alert Message' with the value 'System is over heated. So, please off the Laptop and Sleep'. At the bottom right, there are some small icons and a 'Save' button.

Critical Fields:

1. Name: Give the name of the Alert
2. Alert Processor: Select the Alert Processor from the dropdown
3. Alert Subject: Give the subject for the Alert required
4. Alert Message: Give the Message for the Alert required

Critical & onetime setup fields:

1. Organization: This field is used to select the organization

Non-Critical Fields:

Serial number/Lot number (ASI):

Zoom conditions:

Customization:
