

Process Execution

The screenshot displays a web form for process execution. It includes several input fields with labels: Requisition, Organization, Warehouse, Document Date, Date Required, Priority, User/Contact, Product, Product Category, and Business Partner Group. The 'Document Date' and 'Date Required' fields are date pickers with 'To' fields. The 'User/Contact' field has a search icon. Below these fields are two checkboxes: 'Consolidate to one Document' (checked) and 'Run as Job' (unchecked). At the bottom left, there is a 'Saved Parameters' section with a dropdown menu and two icons. At the bottom right, there are 'OK' and 'Cancel' buttons.

Parameters:

1. Requisition: Select a purchase requisition document number that needs to raise to purchase order, this field only displayed the requisition document number.
2. Organization : It is used to select the organisation name.
3. Warehouse : It is used to select the warehouse name.
4. Document date : It is used to filter requisition document date.
5. Date Required : It is used to filter requisition required date.
6. Priority : It is used to select whether we should give high priority or low priority.
7. User/contact : It is used to mention the contact user name.
8. Product : It is used to select the product name mentioned in requisition.
9. Product category : It is used to select product category type.

10. Business partner group : It is used to select the business partner group.

Process Use:

By using this process we can able to convert multiple requisition into single purchase order if the vendor is same.
