

Generate Payments

- Introduction
- Process - Generate Payments

Introduction

The process of generating payments is a critical component that streamlines financial workflows. This functionality within an ERP system enables organizations to efficiently manage and execute outgoing payments, encompassing vendor invoices, employee salaries, and various other financial obligations.

Business process

As the company expands its client base and project portfolio, managing financial transactions becomes increasingly complex. To address these challenges, the company decides to implement an ERP system to streamline its business processes.
