

# Mail Template Configuration

Windows -> Mail template

We need to configure the mail body content here for triggering mail during registration.

We need use @column Name@ to take data of particular column, and we need to use html tags to align it in proper mail format.

<br> brake

<b>,</b> bold

<u>,</u> underline

Sample format:

Dear @Name@, <br> Login validation successful. Please save the license key attached here with.  
<br>

Thanks! <br>
