Go to Settings to activate Windows.

Criteria

This report is used to track the activities done against the manufacturing order.

Selection fields

- 1) Organization- Select the organization from where the data has to populate.
- 2) Manufacturing Order- If a manufacturing order number is selected then system will display the record based on the document number selected.
- 3) Product- If product is selected then system will displayed the manufacturing orders activity details for the selected product.

Output fields

- 1) Manufacturing Order- System will display the manufacturing order document number.
- 2) Document Number- System will display the cost collector document numbers raised against the manufacturing order.
- 3) Type- System will display the cost collector type from the cost collector master.
- 4) Warehouse- System will display the ware house from the manufacturing order document.
- 5) Resource- System will display the resource (plant) where the manufacturing order is processed.
- 6) Product- System will display the product from manufacturing order document.
- 7) Movement Date- System will display the movement date from the cost collector document.
- 8) Movement Qty- System will display the movement Qty from the cost collector document.
- 9) UOM- System will display the unit of measurement of the product.
- 10) Attribute Set Instance- If any attribute is provided while transaction system will display the detail.
