# Introduction

## **Overview:**

1. Warehouse locators master is used to create the warehouse and locators for the storage.  
The Warehouse Tab defines each Warehouse that is used to store products. If a Source warehouse is selected, all product replenishment is from that warehouse. If you use custom replenishment algorithms, you need to define the class used per warehouse.

## **Business Case:**

1. In a company the warehouse and locators are used to create the particular warehouses for the storage uses.(Ex : Main Warehouse, Subcontract Warehouse,QC Warehouse)
