Introduction

Overview:

1. Warehouse locators master is used to create the warehouse and locators for the storage. The Warehouse Tab defines each Warehouse that is used to store products. If a Source warehouse is selected, all product replenishment is from that warehouse. If you use custom replenishment algorithms, you need to define the class used per warehouse.

Business Case:

1. In a company the warehouse and locators are used to create the particular warehouses for the storage uses.(Ex : Main Warehouse, Subcontract Warehouse,QC Warehouse)
